

For phase 2 javascript tools first Open the phase2 directory in vs code. Then In vs_code terminal go to extension and install live server extension. Then you will see bottom right go live option or in html body section click right side mouse and select the **open with live server** . After that default browser window will pop up. Now Select import for json file. If successfully import then table will show, in table cell filed if **you double click the field will be editable**. After editing the cell you need to click outside the table. Clicking the export button json file will be download. Also pagination display in footer area.
